

Project presentation

Presented by Saransh Garg

Origin of the creative idea

Thank you for joining me today. I'm excited to showcase how Excel can transform the way we work, plan, and visualize data. Excel is more than just a spreadsheet tool; it's a powerful platform for creativity and efficiency.

Step-1

Standardize the "DiscountOffer" column to a single format

35% OFF

=TRIM(SUBSTITUTE([DiscountOffer],"Rs. ",""))

60% OFF

SUBSTITUTE(text, old_text, new_text, [instance_num])

Step-2

Standardize the "DiscountOffer" column to a single format, ensuring all values are uniform.

Column2

```
IF(ISNUMBER(SEARCH("%",[@Column1])),(LEFT([@Column1],SEARCH("%",[@Column1])-1)/100)*[@OriginalPrice (in Rs)],[@Column1])
```

IF(logical_test, [value_if_true], [value_if_false])

Step-3

Identify rows where both "DiscountPrice" and "DiscountOffer" are null and fill the "DiscountPrice" with the average discount price

```
=IF([@[Discount Amount]]="", "", ([@[Discount Amount]]/[@[OriginalPrice (in Rs)]])*100)
```

IF(logical_test, [value_if_true], [value_if_false])

Step-4

Identify rows where both "DiscountPrice" and "DiscountOffer" are null and fill the "DiscountPrice" with the average discount price

```
=IF([@[Discount %]]="",AVERAGEIFS([Discount %],[Category],[@Category]),[@[Discount %]])
```

IF(logical_test, [value_if_true], [value_if_false])

Step-5

Identify rows where both "DiscountPrice" and "DiscountOffer" are null and fill the "DiscountPrice" with the average discount price

674.55			
$=([@[Discount Offer \%])/100)*[@[OriginalPrice (in Rs)]]$			
769.45			

Step-6

Identify rows where both "DiscountPrice" and "DiscountOffer" are null and fill the "DiscountPrice" with the average discount price

Discounted Price				
824				
=FLOOR.MATH([@[OriginalPrice (in Rs)]]-[@[Discount Amount]])				
FLOOR.MATH(number, [significance], [mode])				
893				

Step-7

Calculate the overall average original price for products with ratings greater than 4.

```
=AVERAGEIFS(Table1[OriginalPrice (in Rs)],Table1[Ratings],">4")
```

AVERAGEIFS(average_range, criteria_range1, criteria1, [criteria_range2, criteria2], ...)

Step-8

Count the number of products with a discount offer greater than 50% OFF.

```
=COUNTIF(Table1[Discount Offer %], ">=50")
```

COUNTIF(range, criteria)

Step-9

Create a new column to label the products as "High Discount" if the discount offer is greater than 50% OFF, otherwise label them as "Low Discount."

Column1

Low Discount

=IF([@[Discount Offer %]]>50,"High Discount","Low Discount")

IF(logical test, [value if true], [value if false])

The background is a light gray grid. It is decorated with various pink hand-drawn doodles. At the top left, there are several overlapping loops. To the right of these is a solid pink oval. Further right are more loops. On the far right, there is a star-like shape and some horizontal lines. At the bottom left, there are concentric arcs. In the bottom center, there is a wavy line and a series of small 'v' marks. At the bottom right, there are more loops.

Thank you
